

WAVEGUIDE MATCHED DETECTOR MOUNT (FIXED)

- Model 4155 waveguide Matched Detector Mounts (fixed type) operate over full waveguide frequency bands and these are useful for those applications, where sensitivity is less important.
- These consists of a section of waveguide with short on one end and flanged on the other end. In these detector mount a more sensitive detector with a resistive disc for matching purpose is used. Output connector is BNC(F).

X-4155
